

Drinking Water Revolving Fund Loan

8th Ave Reservoir Improvements: This project involves the installation of a new cast in place concrete tank to replace the 130-year-old stone structure. The new tank will be constructed inside the existing tank and secured to the underlying bedrock. Additional piping and valving work will also provide flexibility of operations to the reservoir.

38th Ave Water Storage Tank: This project will replace a 70-year-old structure with a new water tank. The new tank will provide better flow and pressure to the system.

12th Ave South Water Main Replacement: This project involves the installation of new 8-inch water mains to replace the existing 2-inch through 8-inch water mains along with the installation of a pressure reducing valve and a check valve in a portion of the project area to increase system pressure.
